Very close related to Agate, in many sorts.  
Most found in the best quality in Namibia.  
Often found in very nice geodes with crystal.

# CHALCEDONY

IN MANY COLORS AND VARIETIES FROM BRAZIL, NAMIBIA & MOROCCO.

## CERTIFICAAT

Chalcedony or chalcedon is a semi-precious stone and a variety of the mineral quartz. The color is almost white to light blue or dove blue, often with stripes. The stone is also found in the colors apple green (called chrysoprase), pink, red (variety of carnelian), brown (called sarder) and copper color. Locations are in Brazil, Madagascar, Morocco, India, USA and Tibet, among others. The clear blue chalcedony comes from Namibia and is becoming increasingly rare, so that the stone increases in value. In ancient times statuettes of weather gods were carved from chalcedony. A number of medicinal effects are assigned to chalcedony, namely against hoarseness, almond inflammation, vocal cord problems, varicose veins. Chalcedony belongs to the zodiac signs Cancer and Sagittarius, according to various literature.

- \* Goed voor het immuunsysteem
- \* Tegen nachtmerries
- \* Ondersteunt bij dementeren
- \* Tegen dwanggedachten
- \* Ondersteunt bij chronische ziekte
- \* Tegen angst in het algemeen
- \* Positief voor de longen
- \* Help verslavingen te stoppen
